

Welcome to Psychopy 101

Psychopy is a free software package written in the Python programming language for creating and running cognitive/psychophysics experiments. This introductory class is aimed at beginners and does not require any programming experience.

There are USB keys floating around

Please copy and paste the **ResBaz_Psychopy** folder to your **Desktop**

In the **ResBaz_Psychopy** folder is all you need for today's lesson :D

Navigate in to the folder and double-click the installer to install Psychopy:

Mac > StandalonePsychoPy-1.83.03-OSX_64bit.dmg

Windows > StandalonePsychoPy-1.83.03-win32.exe

Now, you can open PsychoPy2.app
